

Objective:

The AR1005D Dynamic Macro Long Only Portfolio seeks to generate an annualized return of 10% over four years regardless of market direction, using proprietary trend-forecasting and a dynamic approach to asset allocation to limit draw-downs and achieve a Moderate risk profile.

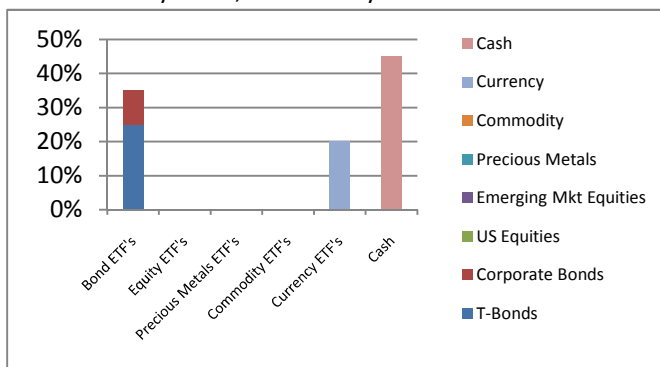

Investment Strategy:

The portfolio pursues positive returns employing an integration of the following strategies to identify and pursue exceptional long-only opportunities in global markets and all asset classes.

1. A macro-economic model that provides a primary-degree bias to the investment strategy
2. A proprietary intermediate-term trend forecasting methodology which combines i) The Elliott Wave fractal model, ii) A technical rate-of-momentum based indicator, and iii) inter-market analysis, to time major turns in each asset class/market.
3. Intelligent diversification to invest only in asset classes showing positive expectancy and meet pre-defined risk/reward criteria.
4. Disciplined use of stops, position sizing, and hedging to limit draw-downs in portfolio values.

Current Model Allocation (as of 7/1/10)

ETF's are used to align with intermediate trends in the long-direction in all asset classes. Allocation in a given asset class is dynamic, i.e. can vary from 0% to 100%.

Target Performance and Portfolio Risk Profile

TARGET RETURN 10% annualized over 4 years, net of fees

LEVERAGE	No (100%)			

The AR1005D portfolio targets an annualized return of 10% net of all fees with a maximum drawdown of 5%. Contact us to learn more about the historical and back-tested performance of the portfolio and its strategies.

This portfolio can be employed by all investors looking for capital appreciation in retirement (AR1005D) or in tax-managed investment accounts (AR1005D-T). The portfolio is geared towards investors with a 4+ year investment horizon with a conservative to moderate risk profile, or as part of a portfolio mix.

What is Absolute Return?

The term “absolute return”, distinguishes the portfolio’s goal and investment strategies from those of “relative return” strategies, which are managed with a goal of outperforming an index of securities. An absolute return strategy seeks a positive total return over a pre-defined period regardless of market conditions or direction.

Team Experience

Our investment management team comprises over 40 years of trading, investment management, systems development, and executive experience.

Fees and Minimum Investment

Tiered annual fees from 2.5% for assets < \$250K down to 1.75% for portion of assets > \$2M. Minimum investment of \$25K (\$500K for the tax-managed version AR1005D-T).
